EXPERIENCE

Jusbrasil - Fullstack Software Engineer
Full-time, Brazil, Remote
August, 2024 - Present

- Developed an entirely new B2C product at Jusbrasil, collaborating with leadership, designers, product managers, and cross-functional teams. Implemented APIs and microservices in Golang to retrieve data from multiple databases and summarize information using LLMs. Managed a Node.js and GraphQL server using TypeScript, GQL, and the Apollo library. Built automated email re-engagement workflows targeting PQLs to drive user retention and conversion. Developed landing pages, new front-end features in React, and A/B tests with event tracking integrated into Kafka pipelines for Metabase analysis. Wrote comprehensive unit tests for both back-end and front-end systems. Conducted peer code reviews within the team and cross-team PR reviews for external stakeholders. Participated in on-call rotations, monitoring organizational system health metrics via Grafana.
- Among the key results are a growth of over 30% in subscription conversion, driven by visual experiments on value proposition and perception through a freemium experience and optimized page messaging and value communication, and 10% in new subscriptions by monetizing high-traffic surfaces, alongside a 4% increase in user engagement. Designed and developed internal self-service solutions and features that empowered organizational multidisciplinary squads, including a tool that decentralized page publishing and resulted in dozens of deployments by multidisciplinary teams.

Escavador - Software Engineer
Internship, Brazil, Hybrid
November, 2022 - July, 2023

- Designed and set up the search engine used by Escavador to store and search billions of documents from several Brazilian law courts and government gazettes; Built a high-performance asynchronous indexer in Python to feed the search engine with entities from multiple MySQL databases — in addition to developing new features for the Vespa.ai repository.

* More experiences and information can be found here.

EDUCATION

Federal University of Bahia
Bachelor's Degree in Computer Science
August, 2021 - Estimated: 2026

Member of GruPro — university's group, aimed at programming competitions, such as ICPC.

Google Cloud Academy
Google Cloud Computing Foundations Academy
March, 2024 - April, 2024

Google's program certificate and additional certificates are available here.

edX - IBM's MicroBachelors Program
Full Stack Application Development
January, 2024 - December, 2024

IBM certificates can be found here.

Harvard Online
Computer Science for Web Programming
January, 2024 - December, 2024

Harvard certificate here.

* See all certifications and details about them here and on my Credly.

SKILLS

Programming Languages, Markup and Styling Languages:
Solid experience with Python, TypeScript, JavaScript, Golang, HTML and CSS.

Web, APIs, Frameworks, Scraping & Crawling and Tools:
FastAPI, Django, Flask; Gin, Express.js, React.js & Next.js; GraphQL; JWT, SOAP and REST; BeautifulSoup, Selenium.

Databases, ORMs and Search Engines:
MySQL, PostgreSQL, MongoDB, Redis; Peewee, Prisma; ElasticSearch, Vespa.ai.

Cloud & Infrastructure and Distributed Systems:
Google Cloud, IBM Cloud; Kafka, RabbitMQ; Nginx; Grafana, Metabase; Docker, Kubernetes and Dokku.

Unit Testing & CI/CD, Packages, Version Control:
Pytest, Unittest, Testify, Jest, Mocha, and Chai; Package creation and management; Git and GitHub workflows.

Clean Code, Design Patterns, Project Standards, and Microservices Architecture:
Development following SOLID; TDD & DDD; Microservices architecture; Procedural Programming, Object-Oriented Programming, and Functional Programming; Application of project patterns and design patterns.

AI Tools and MCPs:
Using Claude Code, GitHub Copilot, Codex, and MCPs (such as Figma, Slack, and Notion) in agile development.

Soft Skills and Agile Methodologies:
Design Thinking, Scrum, Kanban, OKRs (Objectives and Key Results).

* Further skills available here.

PROJECTS

FlightRadarAPI
Python / Go / Node.js SDK

+3 Million downloads
View repository here

SDK for Python, Golang and Node.js — published on PyPI and npm — to retrieve information about flights, aircraft, and airports, sourced from the Flightradar24 website.

PyMemoryEditor
Python Library / Desktop Application / MCP

+700.000 downloads
View repository here

A cross-platform library, desktop application and MCP, developed with ctypes in Python — published on PyPI, registry.modelcontextprotocol.io and Glama (score: A) — for reading, writing, and searching process memory on Windows, Linux and macOS. The desktop app version was built with the Qt framework.

DokkuWeb
Web Application

Access in production
View repository here

A web application built with Next.js (with a backend developed in Python and FastAPI) that acts as a dashboard interface for the Dokku Platform as a Service (PaaS), focusing on institutional use with Google IAM. Its goal is to simplify and enhance the user experience when managing applications through Dokku — while giving administrators granular control over resource allocation and permissions — by providing an intuitive, interactive, and fully responsive interface suitable for both mobile and desktop devices.

* Explore more projects and details on my GitHub.

HONORS & AWARDS

Bronze Medalist (3rd out of 25) at the 2024 ICPC South America/Brazil First Phase
ICPC (International Collegiate Programming Contest), On-site

August, 2024

Global Rank: 131th / Bronze Medalist of Bahia

Honorable Mention - IBM: Marathon Behind the Code (2019) August, 2019
IBM, Remote

Placed 83th of top 100 at the challenge 01 — Pão de Açúcar Group
Placed 23th of top 100 at the challenge 04 — Boticário Group

* Explore more about the competitions held, achievements, and results here.

VOLUNTEER EXPERIENCE

Staff Member at ICPC Latin America Championship 2025 March, 2025 - March, 2025
ICPC (International Collegiate Programming Contest), On-site

Contributed to the organization of the competition.

Speaker at Python Development Workshop - SEMCOMP 23 September, 2023 - November, 2023
InfoJr UFBA | SEMCOMP 23, Remote

Led a workshop, talking about the Python language and its technologies; Built a mini project during the workshop with Flask to upload and edit metadata of music files on a web server.

* More volunteer experiences and information can be found here.

CONTRIBUTIONS ON STACKOVERFLOW:

Contributing to the StackOverflow platform since 2019, helping thousands of people by providing highly detailed answers to specific, practical, or theoretical questions about algorithms, tools, and software development techniques — with over 230 questions answered — ranking among the top 150 users on the platform.
